Elite Points

Simple product requirements for the team · 29 September 2026

The product in one minute

Diners earn **Elite Tokens** when they visit Elite Partner restaurants, pay through Elite, or contribute useful experiences and curations. **Every confirmed Token is available to spend immediately.** They can use Tokens on AI writing, Elara planning, Amplify, and profile customisation. There is no visit threshold or wallet activation step.

Tokens are in-app utility, not money. They cannot pay a restaurant bill, be cashed out, transferred, or converted into rupees. A separate **Status XP** score determines the diner's level. Spending Tokens never reduces XP or level.

The diner journey

Step	What happens	What Elite shows
Earn	Rewards accumulate from eligible activity	"You earned 240 Tokens for this Elite payment."
Available	Tokens become spendable once the activity is confirmed	"240 Tokens added to your wallet."
Choose	Diner selects a priced feature	"Compare restaurants · 50 Tokens."
Confirm	Elite shows balance before and after	"340 available → 290 after this."
Use	Tokens are charged when the feature works	"Your comparison is ready. 50 Tokens used."

Example: On a ₹2,400 Partner visit, a diner gets **50** for the verified visit, **240** for paying through Elite, and **50** for publishing a full verified experience: **340 Tokens total**. The visit and payment rewards become spendable as soon as confirmed; the experience reward follows publication and moderation. These rewards may stack. No additional visit is needed.

1 How diners earn

Action	Tokens	Simple rule
Verified Elite Partner visit	50	Closed final bill of ₹500 or more
Pay through Elite	10% of eligible bill	Bill of ₹500 or more; cap 500 Tokens per payment
Full verified Partner experience	50	Published, moderated, linked to a visit

Action	Tokens	Simple rule
Full verified non-partner experience	30	Published, moderated, linked to a verified visit
Full unverified experience	15	Published and passes content checks
Qualifying public curation	100	Passes curation quality checks

The payment reward uses the **final bill after discounts**, excluding tips, convenience fees and refunded amounts. Round down to whole Tokens. A ₹500 payment earns 50; ₹2,400 earns 240; ₹10,000 earns the capped 500. It is **not 10% cashback**.

Count at most **one rewarded Partner visit per diner, restaurant, and calendar day**. An Elite payment is not required if Explorex verifies the visit another way. A reward awaiting payment settlement, visit verification, or content moderation is **pending**; show why. As soon as it is confirmed, move it to **available**. Only available Tokens can be spent. No additional action activates the wallet.

Experiences must be public, original, and useful: restaurant and outlet, Worth It or Not Worth It, a title of at least 10 meaningful characters, a body of at least 120, and moderation approval. Limit unverified rewards to three per rolling seven days and ten per calendar month. Reward no more than one experience per visit. If an experience becomes verified later, add only the difference, such as 15 more when a 15-Token experience qualifies for 30. A curation needs at least five restaurants and three full experiences by its creator, including one verified experience; limit rewards to two curations per month.

2 How diners spend

The launch catalogue has **four simple uses**. Prices below are proposed defaults; the app should fetch the current price so the team can change it without an app update.

Use	Clear examples	Token prices
Write better	Generate a title; improve a draft; write an experience	10, 15, 25
Plan with Elara	Personalised shortlist; compare restaurants; plan an occasion	25, 50, 75–100
Amplify an experience	Quick, Momentum, or Spotlight exposure	100, 250, 500
Make Elite yours	App icon, profile theme, badge, identity pack	500–1,500

Basic Elara chat and ordinary discovery stay free. A paid Elara action buys a **result or session**, not each message; reasonable follow-up refinements are included. Amplify applies only to eligible published experiences. The purchase screen must state the period and the **“up to” qualified impression target**: Quick up to 250 over 3 days, Momentum up to 750 over 7 days, and Spotlight up to 2,000 over 14 days. It does not promise likes, follows, or visits. Customisation is a permanent unlock unless clearly labelled otherwise.

The purchase screen always answers three questions: What am I getting? How many Tokens will it cost? What will my balance be afterward? If the diner has too few available Tokens, show the shortfall and disable confirmation. Never show a Token-to-rupee conversion.

Charging rule: On confirmation, temporarily reserve the Tokens. Deduct them once the promised result is delivered or the entitlement is granted. If an AI action fails, an Amplify cannot start, or

a customisation cannot unlock, return the reserved Tokens. Retries must not charge twice. An underdelivered Amplify follows a clear published refund rule. Each action appears in wallet history with its price and outcome.

3 Status, expiry, and safeguards

Status XP rewards verified activity, useful experiences, curations, and genuine engagement. It is **separate from Tokens** and cannot be spent. Keep the ten proposed social levels and their activity gates in a separate configuration sheet for implementation; the app shows the current level, progress, and next requirement. Fraud or invalid content may reverse both earned Tokens and XP, but normal Token spending never changes status.

Available Tokens expire **12 months after confirmation**. Spend the earliest-expiring Tokens first, show an expiry reminder, and preserve any permanent item already unlocked.

The system must prevent duplicate rewards and double spending, reverse rewards after refunds or content removal, and keep an auditable history. Token issues must never block a normal restaurant payment. Admins may adjust prices, rules, limits, holds, and rewards with logged reasons. Start with a small controlled pilot and measure time from earning to first spend, repeat visits, content quality, feature use, failed charges, and reconciliation.

Decisions the team still needs to lock

1. Define what counts as one paid Elara session and how many refinements it includes.
2. Define a qualified Amplify impression and the refund formula for underdelivery.
3. Decide how split bills attribute payment Tokens to individual diners.
4. Decide the expiry date of Tokens returned after a failed or refunded purchase.

Ready-to-build test: On a first qualifying ₹2,400 Partner visit paid through Elite, 50 visit Tokens become available after visit confirmation and 240 payment Tokens after settlement. With 290 available, the diner can buy a 50-Token comparison and sees 240 left. A later moderated experience adds 50. If the comparison fails, all 50 reserved Tokens return. Status XP does not change when Tokens are spent.
